

ENERGY INVESTMENT DECISIONS

Make the energy investments that keep your business **competitive**.

AmeLYZE combines engineering knowledge, your operational data and systematic optimisation to compare investment routes before you commit capital.

THE COMPLICATION

A technically feasible solution can still be the wrong investment.

Energy prices change.

Grid capacity can constrain growth.

Technologies interact.

Business requirements evolve.

So the question is not “Do we need a battery?” or “How much solar should we install?”

Which investment route performs best for our business?

The questions AmeLYZE helps answer

What is the best investment route?

Can we grow within our available connection?

Is storage the best route?

Which electrification step is viable?

Can flexibility improve the business case?

What happens if prices, demand or assumptions change?

A better decision takes more than a good model.

ENGINEERING KNOWLEDGE

Consider the right alternatives.

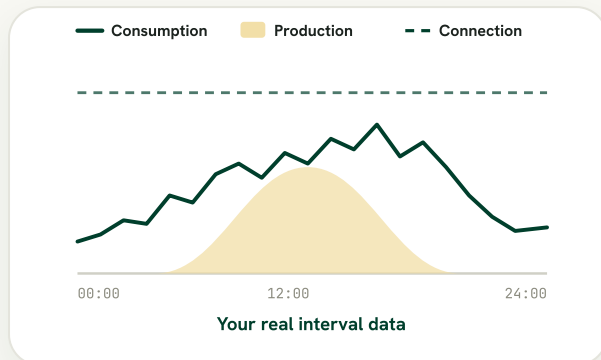

DATA & OPTIMISATION

Systematically determine what performs best.

TRANSPARENCY

Understand why one route performs better than another.

From investment question to business case.

1 ANALYSE

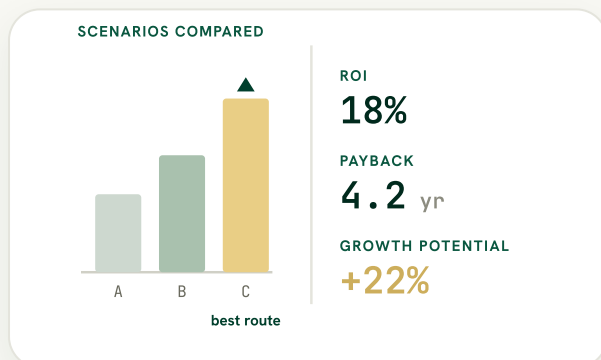

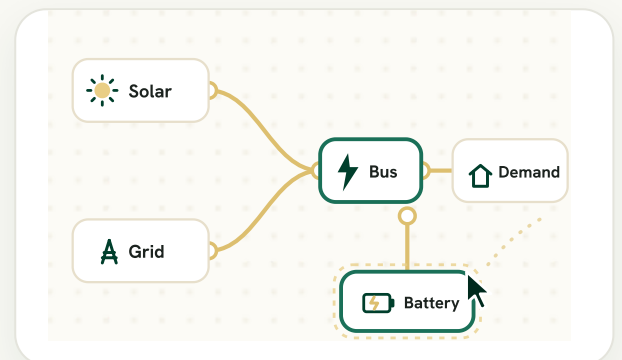

Start with your own data

Use actual consumption, production and contract data to understand how your site really operates.

2 MODEL

Build the alternatives with drag & drop

Create the relevant energy system and compare different combinations of grid, solar, storage and demand.

3 OPTIMISE

Simulate and see the business case

Compare scenarios on asset sizing, growth potential, ROI, payback and flexibility value.

Use AmeLYZE your way

SELF-SERVICE

Build and run the analysis in-house

You or your advisor enters the data and runs scenarios, simulations and business cases directly in AmeLYZE. Suitable for teams that want to keep control.

WITH AMELA

Let AMELA build the decision case

No time, capacity or experience to run it yourself? AMELA performs the analysis on your behalf and delivers outcomes you can act on, including a quick scan.

Let's turn your challenges into opportunities.

Curious how much flexibility, growth potential or investment value is hidden in your energy system? We'd be happy to explore your case.

Discover your energy potential →
